## Glogster

<http://edu.glogster.com>

*Category:  
Web Design*

### About:

Glogster is an interactive visual platform in which users can create a “poster or webpage” containing multimedia elements including: text, audio, video, images, graphics, drawings and data. You can even use your webcam to add video. It is the creativity of this site that makes it so interesting. Students love it!

### Your Mission:

Create a Glog about a topic in your curricular area or grade level. You will be amazed at how easy it is. Let your creative juices flow.

### Uses In The Classroom

- “Poster” the class book you just read or are about to read.
- Create a Glog about your current lesson or unit.
- Encourage your students to build their student portfolio in Glogster, displaying their best work.
- Set up student accounts and assign projects through glogster.
- Cross create by embedding your Glogs into your wikis to encourage parents and outside visitors to come see your class in action.

### Need Help?

### Helpful Hints:

Consider using this for a virtual science fair. Post them all on a website and then send e-mails to leaders in the community to rate them on key points. Announce the virtual winner with the live science fair winner. Encourage students to consider what key points are most important in each version so they can begin to understand why different projects may need to be approached with the viewer in mind.
