Paper Slide Video

Category:
Video Tools

About:

Paper slides are a fun and easy way for students to share what they know about a subject. All you need is a camera a script and some well researched and printed out or drawn pictures. The students then just read the script while videotaping the pictures. You will understand perfectly once you watch the video. This can be done in a classroom period and takes little to no direction for the kids to understand the concept.

Your Mission:

Create a paper slide of a subject that you want the kids to research and then have them reciprocate with a paper slide of their own. I bet you will find some artists in your room!

Uses In The Classroom

- Create a paper slide of the life and times of a famous person from your community or a historical group of people that lived in your area.
- Make a paper slide and include puppets on a stick to enhance the movement of the paper. This may take three people, but can really show depth to a subject.
- Assign a paper slide explanation for a new math problem. Have the kids work in twos and explain how they completed it.

Helpful Hints:

Paper slides are a great way to get the students excited about a not so exciting subject. Please remember that the kids will have to have some knowledge about working video cameras and downloading in order to watch it with the class.

This is definitely a process that should be pretested as software sometimes has to be loaded on a machine in order to view the movies. Preloading the software may take some preplanning with your district.
